## WebSphere MQ Assessment

The intent of this assessment is to evaluate your existing WebSphere integration environment, and review and provide skills transfer on upgrade installations, configuration, operations, monitoring, fault-tolerance, and capacity planning topics that are important to any enterprise trying to maximize the business value from their WebSphere investment.

### Assessment

- *Assessment of your WebSphere server and network environment*
- *Recommendations around available upgrades/enhancements to your WebSphere software on your servers*
- *Bringing up example applications, when required, and explaining the MQ architecture to cognizant personnel*
- *High level collection of your MQ requirements*
- *Analysis of your MQ requirements and development of a high-level strategy to meet those requirements*

### Recommendations

- *Architecture and design techniques and MQ architecture strategies*
  - *Bottlenecks and other performance problems*
  - *Monitoring and management strategy*
  - *Reliability and scalability*
- Recommendations report will include:**
- *Executive summary*
  - *Current environment and Analysis of findings*
  - *High-level MQ design*
  - *Recommended next actions to achieve service level requirements*

### Benefits

- *Ensure existing WebSphere MQ environment is operating as effectively as possible*
- *Improved performance and reliability from WebSphere environment*
- *Help with capacity planning*
- *Help with error detection*
- *Strategies and exception handling*
